
a
Drug–disease candidate query
Drug SMILES
Target Disease
Fragmented Evidence
Drug knowledge
Disease biology
Drug-target mechanisms
Safety / ADMET
Historical trial context
Evidence may be incomplete, uneven across sources, and candidate-dependent
b
Planner-guided multi-source acquisition
Which source next?
What information is still needed?
Is the current record sufficient?
query-specific routing
terminate
YES
STOP?
NO
query next source
Source-attributed candidate record
DrugInfo
DiseaseInfo
DTI
ADMET
TrialPrior
candidate linkage
provenance
Update Candidate Record
Tool-grounded LLM agents
DrugInfo
DiseaseInfo
DTI
ADMET
TrialPrior
(source, relation / prediction, value, entity match, candidate link, provenance)
c
Candidate-level integration and constrained review
Drug / indication records
direct indication match
source-attributed indication records
Target / disease alignment
drug-associated targets
disease-associated targets
DRUG -- DISEASE
ADMET records
predicted safety liabilities
developability context
Historical trial context
disease-level outcome prior
historical feasibility context
Constrained Final Review
Checks grounding and coherence
Reviews source reliability and provenance
Integrates candidate-level signals across sources
Assigns priority and uncertainty
Output
Priority Score
Source-traceable rationale
