a Mavacamten / Symptomatic obstructive hypertrophic cardiomyopathy

Mavacamten
Camzyos
Bristol Myers Squibb

TrialPrior — Prior 0.000; fuzzy HCM match
DTI — Predicted MYH7 binding 0.637
DrugInfo — oHCM match 0.60; MYH7 inhibitor
DiseaseInfo — MYH7; broader cardiomyopathy match

4 sources acquired; then STOP

√ Direct indication overlap with obstructive HCM
√ Drug and disease records converge on MYH7
× Low disease-level feasibility weakens translational plausibility

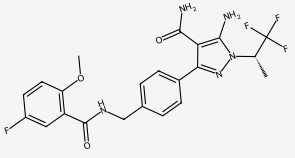

Direct indication overlap and consistent MYH7 evidence across drug and disease records.

Uncertainty: medium

b Pirtobrutinib / Chronic lymphocytic leukemia (CLL)

Pirtobrutinib
Jaypirca Lilly

TrialPrior — CLL-level prior 0.613
DTI — Predicted BTK binding 0.701
DiseaseInfo — BTK associated with CLL
DrugInfo — BTK inhibitor; no direct CLL match

4 sources acquired; then STOP

√ Drug and disease records converge on BTK
× No direct indication evidence was derived for CLL
O Disease-level prior informs feasibility; not drug-specific treatment evidence

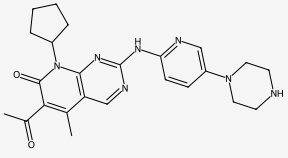

BTK-grounded mechanism and moderate clinical feasibility, despite no retrieved direct indication evidence.

Uncertainty: medium

c Palbociclib / Melanoma

Palbociclib
Ibrance Pfizer

TrialPrior — Melanoma-level prior 0.417
DTI — No overlap; weak pathway similarity
DiseaseInfo — BRAF / CDKN2A / PTEN associations
DrugInfo — CDK4/6 inhibitor; no melanoma match

4 sources acquired; then STOP

× No direct indication evidence was derived for melanoma
O Disease-level prior informs feasibility; not drug-specific treatment evidence

No retrieved direct indication evidence and limited disease-specific mechanistic grounding.

Uncertainty: medium
